SASK	30
Edmonton CMA	33
Calgary CMA	34
Balance AB	35
Vancouver CMA	69
Balance BC	64

- A minimum of 1000 interviews are conducted over the period of one week each month .
- Margin of Error +/- 3.1% at 95% Confidence Interval.
- The nationally representative sample is drawn randomly using ASDE software.
- The respondents selected for interviews are those who are 18 years of age or older and have celebrated the most recent birthday.
- The DASH CATI telephone interviewing system is used for all respondent contacts.
- Data collection is conducted from BBM Analytics call centres.
- Respondents are interviewed between 5:00 PM and 9:30 PM, local time, on weekdays and between 10:00 AM and 5:00 PM on weekends.
- A minimum of 5% percent of each interviewer’s work is monitored for quality control in accordance with the industry standards set by the Market Research and Intelligence Association (MRIA).
- The survey data is weighted by age, gender and region using Canadian 2006 Census data to ensure representation of the total Canadian population 18 year of age or older.
